Employee Benefits

The Benefits of Using Contract Equity to Attract, Reward, and Retain Key Employees of Closely-Held Companies

Mark E. Bokert and Alan Hahn

In today's hypercompetitive business environment, non-public companies are always looking for effective and creative ways of attracting, retaining, and incentivizing their key employees. For many non-public companies, the perfect solution is a phantom equity arrangement (also known as a contract equity arrangement). A phantom equity arrangement offers, among other things, flexibility and simplicity, particularly as compared to real equity awards, such as stock options. This column compares stock options and phantom equity arrangements to provide a clear understanding of the advantages of a phantom equity arrangement. This column also discusses "profits interests," which is another approach to granting real equity to key employees of limited liability companies.[1]

Stock Options

When a company issues a stock option to an employee, it is giving the employee the right to purchase a specified number of shares of the

Mark E. Bokert is a partner and co-chairs the Benefits & Compensation Practice Group of Davis & Gilbert LLP. His practice encompasses nearly all aspects of executive compensation and employee benefits, including matters related to equity plans, deferred compensation plans, phantom equity plans, qualified retirement plans, and welfare plans. Mr. Bokert may be contacted at *mbokert@dglaw.com*. Alan Hahn is a partner and co-chairs the Benefits & Compensation Practice Group of Davis & Gilbert LLP. His practice is devoted to advising clients of all sizes, including in the design and implementation of a wide variety of creative, unique, and tax-effective employee benefit plans and programs. Mr. Hahn may be contacted at *ahahn@dglaw.com*.

company's stock at a fixed price at a future date. The fixed price is called the "exercise price" or "strike price" and is equal to the fair market value of the underlying stock on the date the option is granted. The future date upon which the employee may exercise his or her option to purchase the stock is typically the vesting date. Once the vesting date occurs, the option remains exercisable for a period of time, such as until 90 days after the employee terminates employment. Once the option is exercised, the employee receives the stock. The employee may immediately sell the stock or hold the stock for purposes of selling it later, assuming there is a market for the stock. In the case of a non-public company, typically the only time an employee is able to sell his or her stock is when the majority owners decide to sell the company to a third party. As explained below, stock options are highly regulated and complex. Favorable tax treatment is rarely, if ever, achieved. Finally, a holder of real equity has the statutory right in most jurisdictions to review the books and records of the company that has issued the real equity, which is something most private-company issuers would prefer to avoid.[2]

Tax Treatment of Stock Options

One of the perceived advantages that a stock option has to a phantom equity arrangement is the opportunity for the option holder to receive long-term capital gains tax treatment. Such tax treatment is available on the appreciation of the value of the underlying stock from the date the option is granted or exercised, depending on the type of option, until the date the stock is sold. However, as illustrated below, in order for an option holder of stock in a non-public company to receive such favorable treatment, the option holder must pay the exercise price, possibly incur a tax, hold the stock for more than a year, and then hope that the company is eventually sold. For the vast majority of option holders, these costs and risks are simply not worth it. As a result, the vast majority of option holders will only exercise their options concurrently with, or just before, the sale of the company. This results in the appreciation in the value of the underlying stock being taxed as ordinary income, which is no better than phantom equity.

The tax treatment of a stock option depends on whether the option is a nonqualified stock option (also known as a non-incentive stock option) or a qualified stock option (also known as an incentive stock option). In the case of a nonqualified stock option, the option holder does not incur any tax until the option is exercised. When the option is exercised, the option holder recognizes taxable ordinary income equal to the difference between the fair market value of the stock on the date of exercise and the exercise price.[3] Another tax event occurs when the option holder sells the stock.[4] If the option holder holds the stock for more than one year following the exercise date, any gain in the stock's value from the date of exercise to the sale date will be taxed as long-term capital gain, which

is subject to favorable tax rates. However, if the option holder holds the stock for one year or less, any gain in the stock's value from the date of exercise to the sale date will be taxed as ordinary income.

Here is an illustration of the tax treatment of a nonqualified stock option. Suppose a stock option to purchase 100 shares of stock is granted to Employee X. The exercise price of the stock option is $5/share (i.e., $500 in total) and the option vests in three years. Employee X does not incur any tax when the stock option is granted or when it vests. After the option vests, Employee X exercises the option at a time when the stock underlying the option is worth $7/share. Therefore, at the time of exercise, Employee X incurs ordinary income of $200 (i.e., $700 minus $500). Employee X holds the stock for more than one year following exercise of the option and then sells the stock when the stock is worth $11/share. Therefore, at the time of sale, Employee incurs long-term capital gain of $400 (i.e., $1100 minus $700). If Employee X sold the stock within a year of exercising the option when the stock was worth $8/share, Employee X would realize $100 of ordinary income (i.e., $800 minus $700).

In the case of an incentive stock option, if certain requirements are satisfied,[5] the option holder does not incur any tax until the underlying stock is sold, at which time the option holder recognizes long-term capital gain equal to the difference in the sales price of the stock and the exercise price. In other words, the full appreciation in the value of the stock from the date of grant to the date the stock is sold is taxed as long term capital gain.[6] For a variety of reasons, including the numerous requirements applicable to incentive stock options, most private companies only issue nonqualified stock options. In addition, incentive stock options may only be issued by corporations and, as explained below, may be subject to the alternative minimum tax.

Section 409A

In large measure, the difficulty with stock options stems from the myriad of laws and regulations that must be considered when creating a stock option plan. One example is Section 409A of the Internal Revenue Code. In order for stock options to work properly, they must be structured to be exempt from Section 409A.[7] There are numerous requirements that must be satisfied in order for a stock option to be exempt from Section 409A.[8] With respect to nonqualified stock options, one requirement is that the exercise price must not be less than the fair market value of the underlying stock on the date of grant.[9] For non-public companies, determining fair market value can be an onerous task.

In order to value its stock, non-public companies need to use a "reasonable" application of a "reasonable" valuation method.[10] Whether a valuation method is "reasonable" depends on the surrounding facts and circumstances, but at the very least should consider the following factors:

1. The value of the company's tangible and intangible assets;

2. The present value of the company's anticipated future cash flows;

3. The market value of stock of similar companies;

4. Recent arm's length transactions involving the company's stock; and

5. Other relevant factors such as (a) valuation premiums and discounts, and (b) whether the valuation method is used for other purposes.[11]

Moreover, the valuation of stock is not reasonable if it is more than 12 months old or does not take into account any material recent developments regarding the issuer.[12]

Three safe-harbor valuations methods are presumed to be "reasonable." The first safe harbor is a valuation performed by an independent third-party appraiser.[13] Such appraisals, however, can be costly. The second safe harbor is the use of a fair market value valuation formula, which may only be used if several restrictive conditions are met.[14] One such restriction is that if an employee wants to sell the company stock, then he or she must offer to sell only at the formula value. Under the final safe harbor, an appraisal of the stock is also required and must take into account the five factors discussed above.[15] However, the person performing the appraisal need not be independent of the company, but does need to have at least five years of experience in business valuation or a similar field. This final safe harbor is only available to companies that have been in business 10 years or less.

In order to be exempt from Section 409A, a stock option must also satisfy the following additional requirements:

1. The stock that the option provides a right to purchase must be "service recipient stock" (generally, common stock of the company for which the option holder provides services to or its parent);

2. The number of shares subject to the option must be fixed on the grant date;

3. The transfer or exercise of the option must be subject to taxation under Section 83 of the Internal Revenue Code (this requirement is typically met); and

4. The option does not include any feature for the deferral of compensation other than the deferral or recognition of income until the later of (a) the exercise or disposition of the option, or (b) the time the stock acquired by exercising the option becomes substantially vested.[16]

Securities Law

Stock options are also subject to securities laws, which add to their complexity. As a general matter, all securities offered in the U.S. must be registered with the SEC or must qualify for an exemption from the registration requirements. Stock options offered by a private company are not registered, so they must qualify for an exemption. The most common exemption used by private companies is Rule 701.[17]

Rule 701 allows private companies to grant equity awards pursuant to a written compensatory benefit plan, such as a stock option plan. Stock options may be granted to the issuing company's employees, directors, officers, and consultants and advisors.

Under Rule 701, a company does have any filing requirements and no federal filing fees need to be paid. There are, however, important conditions and requirements that must be satisfied in order to use Rule 701. Violating the rule may subject the company's officers and directors to serious consequences.

One requirement of Rule 701 is that the company issuing the options must provide to participants a copy of the plan as well as their option agreement. Further, if the amount of options issued in any 12-month period is greater than $5 million (measured by exercise price), the company must provide additional disclosure, including a summary of the stock option plan, risk factors associated with the stock underlying the options, and detailed company financial statements.

Another requirement under Rule 701 is that the total amount of options granted in any 12-month period (measured by exercise price) cannot be greater than:

- $1 million; or
- 15 percent of the issuing company's total assets (measured by the company's most recent annual balance sheet date); or
- 15 percent of the outstanding amount of the class of securities being issued under the stock option plan.

In addition, there are special requirements when issuing stock options to consultants and advisors under Rule 701. Specifically, stock options may be issued to "consultants and advisors" only if they (i) are natural persons, (ii) provide "bona fide services" to the issuing company, and (iii) the services are not in connection with any offer or sale of securities in a capital-raising transaction.

Alternative Minimum Tax

Another disadvantage to granting incentive stock options is that the spread between the exercise price and the value of the stock at the time

of exercise may be subject to the alternative minimum tax (AMT). The AMT was enacted to prevent high wage earners from paying too little tax because of various tax deductions and exclusions. Generally, to compute AMT a taxpayer must calculate their regular taxable income and then add back in certain exclusions and deductions (referred to as "preference items"). One such preference item is the spread between the exercise price and the value of the stock at the time of exercise. The bigger the spread at the time the incentive stock option is exercised, the more AMT the taxpayer may be required to pay.

Phantom Equity Arrangements

Phantom equity arrangements are subject to much less regulation than real equity awards and, therefore, are much more flexible. As explained below, about the only legal requirement that needs to be addressed when designing a phantom equity arrangement is Section 409A of the Code. Phantom equity awards are also favorable from a tax perspective since the recipient of the award is never taxed until the award is paid, and from a cash flow perspective since the recipient never has to pay anything for the award. Finally, the recipient of a phantom equity award, unlike a holder of real equity, does not have the right to review the books and records of the issuing company.

A phantom equity arrangement can be established by any type of entity, including an S corporation or an LLC. It can be designed to mirror any type of real equity award and can provide any type of short or long-term incentive. What does a phantom equity arrangement look like? In its simplest form, a phantom equity award entitles an employee to a percentage of the net sales proceeds that the owners of the company realize when the company is sold. For example, if an employee is granted a phantom equity award entitling him or her to one percent of the net sales proceeds and the company is sold for $10 million, the employee would be entitled to $100,000.

A phantom equity award can also be structured to mirror a stock option, such that it entitles an employee to a percentage of the appreciation in the value of the company, measured from the date the phantom equity award is granted to the date the company is sold. For example, if an employee is granted a phantom equity award entitling the employee to one percent of the appreciation in the value of the company, and the company is assigned a value of $4 million when the award is granted, the employee would be entitled to $60,000 if the company is later sold for $10 million. Phantom equity awards can also be structured to pay annual incentives, such as a percentage of an annual profit distribution in the case of a limited liability company.

Tax Treatment of Phantom Equity

One of the benefits of a phantom equity award is that the recipient of an award that provides a sale event payment never incurs a tax until the company sold. Thus, there is no tax when the award is granted, there is no tax when the award vests and there is no tax when the award is exercised (because the award is never actually exercised). The only time the recipient of a phantom equity award is taxed is when the recipient is paid his award, i.e., when the company is sold. If the company is never sold, then the recipient will never pay a tax. When the company is sold, the payment made to the award recipient is treated as ordinary income, subject to ordinary income tax rates as well as withholding. The one minor exception to the foregoing is that annual distributions made under a phantom equity arrangement are taxable in the year distributed.

Section 409A

When designing a phantom equity arrangement, one must be careful to structure the arrangement to be exempt from, or compliant with, Section 409A of the Internal Revenue Code. Failure to be exempt from, or comply with, Section 409A will result in penalties to the employee, including an additional 20 percent tax on the amount involved.[18] Generally, an award will be exempt from Section 409A under the so-called "short-term deferral rule" if it is paid no later than March 15 of the year following the year in which the award vests (i.e., is no longer subject to a substantial risk of forfeiture).[19]

Typically, in order to satisfy the short-term deferral rule, a phantom equity arrangement will condition payment of an award on the employee remaining employed by the issuing company through the date of payment. In effect, this causes the award to vest on the date of payment and, therefore, satisfy the short-term deferral rule. If an arrangement is not exempt from Section 409A, then it must comply with Section 409A. Generally, in order to comply with Section 409A, a phantom equity arrangement will specify that the award will be paid upon a "change in control" of the issuing company, as defined under Section 409A. Under Section 409A, a change in control occurs if there is a "change in ownership" of the company, a "change in effective control" of the company, or a change in ownership of a "substantial portion of the assets."[20]

A change in ownership of a company occurs when one person or a group acquires stock (or other ownership interest) that, combined with stock (or other ownership interest) previously owned, controls more than 50 percent (or such greater amount specified by the phantom equity arrangement) of the value or voting power of the company.[21]

A change in effective control occurs on the date that, during any 12-month period, either (x) any person or group acquires stock (or other ownership interest) possessing 30 percent (or such greater amount specified by the phantom equity arrangement) of the voting power of the company, or (y) the majority of the board is replaced by persons whose appointment or election is not endorsed by a majority of the board.[22]

A change in ownership of a substantial portion of the assets occurs on the date that a person or a group acquires, during any 12-month period, assets of the company having a total gross fair market value equal to 40 percent (or such greater amount specified in the phantom equity arrangement) of the total gross fair market value of all of the company's assets.[23]

Securities Law

Phantom equity arrangements are generally not subject to securities laws.

Drafting a Phantom Equity Arrangement

Any company that wishes to establish a phantom equity arrangement should consult with an experienced executive compensation lawyer. The lawyer will analyze the company's goals, recommend a design, and draft the applicable documents. He or she will also review other features that could be added to the phantom equity arrangement, such as protective covenants. Protective covenants may include an agreement by the employee not to compete with his employer, not to solicit clients of his employer, not to solicit other employees of the employer, not to disclose confidential information of the employer and not to disparage the employer. The arrangement can also impose other duties on the executive, e.g., such as an obligation to provide notice before he or she resigns from employment.

Profits Interests

A company that is structured as a limited liability company ("LLC") and which is taxable as a partnership has the ability to grant "profits interests" to motivate and reward its key employees. A profits interest is an interest in the future profits and/or appreciation of the assets of the LLC. A profits interest is real equity that offers certain advantages (in particular, the ability of the recipient to receive long-term capital gain treatment), but also has certain disadvantages, as discussed below.

Profits interests, if properly structured, are not taxable when they are granted or when they vest. Like a stock option or phantom equity, a profits interest may vest based on continued service or the attainment of performance goals or may be fully vested upon grant. Unlike a stock

option, no exercise price needs to be paid for a profits interest. The main benefit of a profits interest is that when it is sold, any appreciation over and above its value on the date of grant will be taxed as long-term capital gain, provided the applicable one-year holding period is satisfied.

For illustration, suppose a LLC has two owners. Each owns one-half of the LLC. Then, the company grants a 10 percent profits interest to a key employee at a time when the company was worth $1 million. The profits interest is subject to a three-year cliff vesting provision. If the profits interest is structured properly, the key employee will not pay tax when the profits interest is granted or when it vests. Four years after the profits interest is granted, the LLC is sold for $5 million. Of the $5 million, the first $1 million is divided equally among the two original owners. Nothing from that $1 million goes to the recipient of the profits interest because a profits interest only represents a right to receive future appreciation. The remaining $4 million is distributed 45 percent to each of the original owners and 10 percent to the profits interest holder, who receives $400,000 taxable as long-term capital gain.

There are several requirements that must be satisfied for a profits interest to be non-taxable to the recipient upon grant. One requirement is that the profits interest must be granted to the recipient as a result of the recipient providing services to the LLC. Another requirement is that the profits interest must not be disposed of within two years of grant. If these and other, more technical requirements, are satisfied, a profits interest will not be taxable when granted to the recipient because, in the view of the Internal Revenue Service ("IRS"), the profits interest will have no current ascertainable value.

Among the perceived disadvantages of a profits interest is that when a key employee is granted a profits interest he or she will then become a member of the LLC. Generally, members have the right to review the books and records of the LLC. The LLC operating agreement may also have to be modified to, among other things, provide tax distributions to the profits interest recipient and to avoid giving important rights to the recipient (e.g., managerial rights).

It is also important to note that once a key employee receives a profits interest in an LLC, he or she will no longer be an employee of the LLC for tax purposes. This means that the person will receive a K-1 instead of a W-2, and that any payment made to the recipient for the performance of services to the LLC will be subject to self-employment tax. It also means the recipient will no longer be able to realize the tax-advantaged benefits of certain arrangements sponsored by the LLC for its employees (e.g., cafeteria plan, flexible spending account, transportation benefits).

Conclusion

Non-public companies are always looking for new ways to attract, retain, and reward their key employees. In many cases, these companies

will want to consider a phantom equity arrangement. In comparison to real equity, a phantom equity arrangement is subject to far less regulation and, therefore, can be more easily tailored to fit the company's needs. Phantom equity also has advantages from a tax and cash flow perspective. Finally, unlike a recipient of real equity, a recipient of phantom equity does not have the right to review the books and records of the issuing company. If the non-public company is an LLC, it may wish to consider granting profits interests to their key employees, but should only do so with an understanding of the corresponding advantages and disadvantages.

Notes

1. Profits interests may also be granted by partnerships.

2. *See, e.g.,* Del. Code § 220(b); NY BSC Law § 624(b); Cal. Com. Code § 1601.

3. Section 83 of the Internal Revenue Code of 1986, as amended ("Code").

4. Code § 1001(a).

5. To be "qualified," a stock option must satisfy numerous requirements, e.g., the optionee must be an employee, the plan must designate the number of shares that may be issued as qualified stock options, and the plan cannot have a duration that exceeds 10 years. Code § 422.

6. In order to incur this favorable tax treatment, the underlying stock must not be sold within one year of date of exercise and two years of date of grant. Code § 422(a)(1).

7. A stock option that is exempt from Section 409A may be exercised at any time after vesting. A stock option that is not exempt from Section 409A may be exercised only at specific times permitted by Section 409A. Thus, much of the "optionality" of the stock option is destroyed if it is not exempt from Section 409A.

8. To be exempt from Section 409A, non-qualified stock options must satisfy the requirements set forth under Treas. Reg. § 1.409A-1(a)(5)(i)(A). Generally, qualified stock options meeting the requirements of Section 422 of the Code are automatically exempt from Section 409A. *See* Treas. Reg. § 1.409A-1(a)(5)(ii).

9. Treas. Reg. § 1.409A-1(a)(5)(i)(A)(1).

10. Treas. Reg. § 1.409A-1(a)(5)(iv)(B)(1).

11. *Id.*

12. *Id.*

13. Treas. Reg. § 1.409A-1(a)(5)(iv)(B)(2)(i).

14. Treas. Reg. § 1.409A-1(a)(5)(iv)(B)(2)(ii).

15. Treas. Reg. § 1.409A-1(a)(5)(iv)(B)(2)(iii).

16. Treas. Reg. § 1.409A-1(a)(5)(i)(A).
